Michigan customer choice

Most Michigan electric customers have a Retail Access Service option, or choice to purchase their generation and transmission service from a licensed unregulated Alternative Electric Supplier (AES) at a price determined solely between the customer and the AES, with power delivered through the Company's distribution system. The AES will charge its customers for the energy and transmission services to transport the electricity across the high-voltage lines to your business. The utility will charge AES customers for the distribution services on the low-voltage lines. And, beginning in June 2018, the utility will charge AES customers for the availability of generation (capacity) if the AES has not secured generation capacity for your business. Customers may continue to buy their power supply from the local utility under Full Requirements Service at prices regulated by the Michigan Public Service Commission.

The base energy charges are subject to a Power Supply Cost Recovery (PSCR) factor to reflect changes in fuel costs. The current PSCR factor is \$0.00000 per kWh. The current cost base is \$0.05710 per kWh.

For businesses with greater than 100 kW demand

Time-of-Use

With Time-of-Use, your business pays more for electricity used during on-peak hours than during off-peak hours. These rates more accurately reflect the price of electricity at the time it's used. A business with less than 100 kW demand, that uses less than 25,000 kWh of electricity per month, may choose from three different pricing options. Customers with 100 kW demand or more for three consecutive months automatically receive Time-of-Use rates for specific time periods.

Interruptible electric rate (Cp-1M)

Businesses save money by identifying blocks of electric load (at least 200 kW of combined load) that can be interrupted upon notification. These customers receive a discounted demand rate for interruptible loads through a five-year contract.
